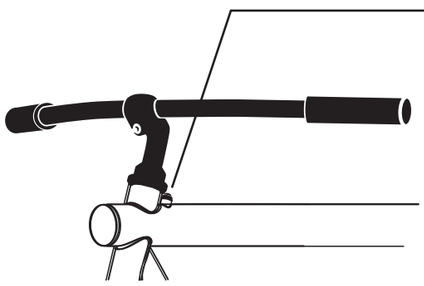
you have a personal powersource in the front hub of your bike. Pedal for power!

POWER SWITCH



On top of your top tube, near the handlebar, there is a power switch.

If you turn it on, you will switch on the Philips lights.

If you turn it off, it will gradually dim down the lights.

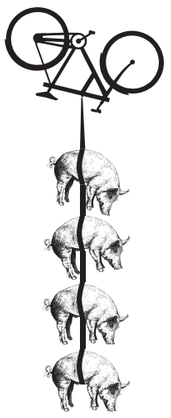
NOTE

Your lights only work when you move, as they are directly powered by the dynamo hub in your front wheel.

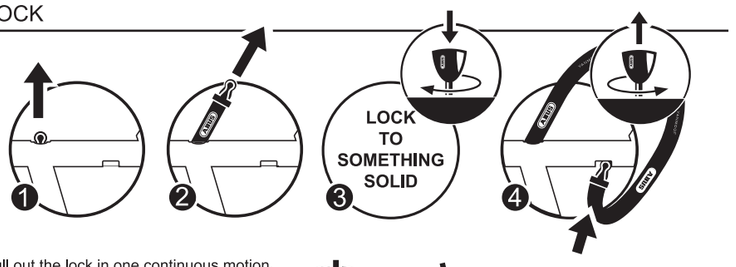
VANMOOF × ABUS

Together with ABUS we have developed the ultimate lock. Use it to lock your bike to a solid object, or lock the bike through the frontwheel.
The lock is capable of holding more than a ton in load, and has parts that meet the highest quality standards in the market. The lock is only available on the VANMOOF 5. However we do supply aftermarket solutions for the other models as well.

Go to vanmoof.com to find out more about this cooperation.



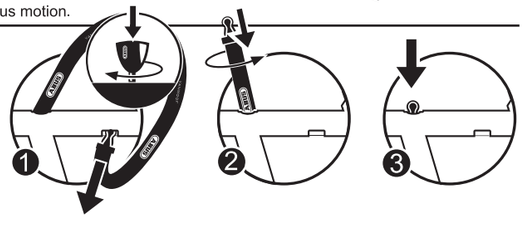
LOCK



Pull out the lock in one continuous motion.

UNLOCK

Use the weight of the chain to slide it back into the frame in one continuous motion. Make sure to make a twisting movement, rotating the chain around its axis.



Please write down the ABUS key code from the code card attached to the keys. If both keys are lost this key code makes your life a whole lot easier!
